

Karthik:

1. Verify final cleaned dataset:

- Total observations
- Number of countries per year
- Confirm no NA values

2. Produce:

- Mean (2013 & 2014)
- Median
- Standard deviation
- Minimum
- Maximum
- Range

3. Create a clean summary table like:

| Year | Mean | Median | SD | Min | Max |

4. Write short interpretation (3–4 lines max):

- Which year has higher average?
- Is variation large?
- Is distribution skewed?

Vaishnavi:

1. Create:

- Boxplot (2013 vs 2014)
- Bar chart (mean comparison)
- Optional: Histogram per year

2. Ensure:

- Proper axis labels
- Titles clear
- Units mentioned (%)
- No clutter

3. Write:

- 2–3 line explanation per figure
- **Mention median, spread, visible difference**

Bindu:

1. Perform:
2. `t.test(Resistance ~ Year, data = amr_data)`
3. Provide:
 - p-value
 - t-statistic
 - Confidence interval
 - Difference in means
4. Check assumptions:
 - Mention independence
 - Mention approximate normality
5. Write:
 - Clear statistical decision:
 - Reject H_0 or Fail to Reject H_0
 - One paragraph interpretation
